

Knorr-Bremse is the global market leader for braking systems and a leading supplier of other safety-critical rail and commercial vehicle systems. Knorr-Bremse's products make a decisive contribution to greater safety and energy efficiency on rail tracks and roads around the world. About 29,700 employees at over 100 sites in more than 30 countries use their competence and motivation to satisfy customers worldwide with products and services.

PRODUCT MANAGEMENT ENGINEER

Management and maintenance of information related to the products produced by the development team and by engineering locations worldwide (Spain, Austria, China, India, Australia, USA). This includes the product lifecycle management mainly through the use of Windchill and any other tool related to Product Management (querying and managing products related data).

Functions:

- Support the Product Manager in the definition of Product Management roadmaps for the R&D activities.
- Support the Product Management in the execution of any Product Management related task in the context of the global R&D Department and Engineering teams. This includes PLM and PDM tasks; KPIs; Cost Analysis and any other Data Management task.
- Ensure R&D outputs are properly released and documented within the PLM system. The information released is accessible, understandable, clean and reliable.
- Define the PLM International processes related to the use of R&D outcomes and make sure these processes are implemented and integrated into the existing Engineering Processes worldwide.
- Able to support the design of tools and processes automation scripts within the R&D Department, related to PLM, KPIs; Cost Analysis and any other Data Management activity.
- Perform Training/Coaching activities to the HVAC sites related to the use of any tool developed by the R&D Department. This includes PLM and PDM; KPIs; Cost Analysis and any other Data Management Tool.
- Focus on standardization of PLM activities among HVAC sites, identify disconnections and inform the Product Manager.
- Able to perform the role of International Central Data Manager for HVAC Product Libraries.
- Experience on IoT and web technologies (python, javascript..) to send and retrieve product related data from cloud platforms (MS Azure, AWS...).
- Able to optimize Product management tasks and processes, using state of the art technologies and developing customized software solutions.

Requirements:

- Experience of at least 3 years in a similar position.
- Knowledge of PLM, PDM, CAD.
- Knowledge of Office Package including Excel macros.
- Knowledge of Data Management tools.
- Knowledge of IoT and web technologies (python, javascript...).
- Excellent command of English and Spanish.
- Engineering Principles such as 3D and 2D files.

**As an inclusive company, we favor access to the labor market for people with other abilities, by providing the corresponding disability certificate.*

We ask those who are interested or can contribute candidates who meet the required profile, contact Nuria Marcos (nuria.marcos@aren.es).
